Memo to File:

Re: Atlas Minerals  
Radium King E. & W. Channels  
ACT/037/007

On September 22, 1977, Ron Daniels and Brian Buck visited this active uranium mine.

Since the operation was approved by the Division, some noticeable activity has taken place. A number of house trailers have been moved in. The spring water system has ~~not~~ been connected up. The general camp area has been cleared of the pre existing debris and the buildings have been fixed up. The debris has been pushed into a small revine and should be covered with rock or soil. *a*

Improvements to the East Channel Mine workings consist of restoring the production portal, removing the hoist from the lower 'A' portal and converting it to a ventilation portal and trenching the pad at the middle 'B' portal for drainage control. New spoil has been placed on the old spoil area.

No activity was apparent at the West Channel Mine.
